**Reasons for Allowance**

1. This is in response to the amendment filed on 07/15/2009.

Claims 1-20 are allowed. Prior art of record, Loveman, "The DEC High Performance Fortran 90 Compiler Front End", discloses a front end in compilation that does the syntax check to a source input program. When compiling a program that encounters an intrinsic function, it performs checking on the intrinsic definition.

The Claims 1-20 are amended. Applicants argued Loveman fails to disclose the recitation in claim 1, and in the same manner in independent Claims 13, 20,

"... replacing, by a code optimizer, the multiple machine instructions by a user-defined machine instruction stored in the intrinsic function definition database in the case where the multiple machine instructions generated from the input source program by the code generator are determined to exactly match the machine instructions generated from the details of an intrinsic function definition body of the user-defined machine instruction...".

The prior arts of record fail to anticipate the recitation.

"Anticipation requires the presence in a single prior art disclosure of all elements of a claimed invention arranged as in the claim." *Connell v.Sears, Roebuck & Co.*, 722 F.2d 1542, 1548 (Fed. Cir. 1983).
